As we enter 2020, we continue to focus on our mission to help scientists and researchers solve the toughest problems in life science. To support this, Merck has signed an agreement with CSIR-IMTECH, Chandigarh to set up a high end skill development centre. This along with Merck Innovation Lab at Bangalore will facilitate training and development for scientists, academicians, researchers and students.

In order to keep up with our commitment of advancing Science, Merck continues to invest in Life Sciences industry and come up with new **platforms**, portfolios and services.

Our ZooMAb® recombinant antibodies platform represents an entirely new generation of recombinant monoclonal antibodies that offer the superior specificity and affinity of a monoclonal and polyclonal combined with the flexibility of a recombinant for a wider selection of targets, formats, and species.

To us, the upcoming year is going to be a year of great transformation. As the country is all set to adopt digitalization and expand existing infrastructure base, we too are investing in technology and infrastructure to increase the efficiency of our services. Our digital platforms such as B2B online order transactions and Website Pipeline Enablement is a successful addition to our existing management team of account managers, dealers, and distributors.

Our state-of-the-art warehouse in Patalganga - Navi Mumbai, spread across 10 acres is designed to meet the future growth, further improving inventory availability and reducing lead times for our products. Merck is now designated by "Goodfellow" as its exclusive partner providing products for material science researchers in India.

On behalf of my colleagues in India, I extend my best wishes to you for the New Year. We really appreciate your contribution in our success and look forward to a rewarding and fruitful 2020 together.

Thank you!

Leverage DNA - Encoded library technology for drug discovery

DNA - Encoded library (DEL) technology is a drug discovery tool containing small DNA-barcoded compounds (Satz 2018). The DyNAbind fragment DEL contains small molecular weight compounds. The high ligand efficiency of fragment molecules is harnessed to effectively probe a target's binding site and increase the likelihood of discovering binders

Targeted protein degradation

An emerging strategy in drug discovery to access difficult-to-treat diseases is targeted protein degradation. While traditional small-molecule or antibody drugs may only allow access to ~20% of the proteome, degradation techniques may open the door to the other 80%.¹ The molecules used in these approaches are often called **Proteolysis Targeting Chimeras (PROTACs)**, bifunctional molecules that eliminate target proteins from cells

- 1 PROTAC design**
Constructed to bind both protein of interest (POI) and E3 ligase through a crosslinker
- 2 Ternary complex**
PROTAC recruits POI to E3 ligase
- 3 Polyubiquitination**
Ubiquitin (Ub) added to POI Lys residues
- 4 Target degradation**

Meet Synthia™

The Future of Retro Explore the Known and Unknown

The most significant challenge in finding viable pathways is navigating the complex matrix of synthetic possibilities while accounting for what has been done, what could be done and what starting materials are available.

With Synthia™ retrosynthesis software, **you can easily analyze tens of thousands of pathways for known and novel molecules against your search criteria** - and quickly go from imagining what's possible to testing what's probable.

Coded by Chemists

Engineered by organic chemists and computer scientists over 15 years, Synthia™ harnesses the potential of advanced, highly nuanced algorithms powered by more than 60,000 hand-coded reaction rules. For each step that's analyzed, Synthia™ goes beyond looking at a few local interactions at the reaction center. The entire molecule is considered as well as potential conflict and selectivity issues in addition to providing stereo- and regioselective reactions.

Synthia™ explores novel and known solutions, eliminates nonviable options and presents the user with the most promising pathways

Three Design Modules to Amplify Your Approach:

Automatic Retrosynthesis

Computer-guided retrosynthetic design. Work back to commercially available building blocks while promoting preferred chemistries, minimizing cost and step count, and protecting groups.

Manual Retrosynthesis

Hands-on retrosynthetic design. Start with the target and walk iteratively backward through all possible reactions until you reach viable starting materials.

Known Network of Organic Chemistry

More than 10 million substances and reactions from literature. Quickly combine several syntheses into one optimized pathway based on cost, step count and frequency of substrates in literature.

Elemental Impurity Mixes as Certified Reference Material Standards for USP<232> and Ph. Eur.9th Edition

Contamination of drug products with elemental impurities poses a risk to patient health. It is therefore critical to control, within acceptable limits, the levels of these impurities introduced into drug products through each step of the manufacturing process. Effective January 1, 2018, the United States Pharmacopeia (USP), as well as the European Pharmacopeia (Ph. Eur) will adopt the ICH Q3D guidelines on specification limits for elemental impurities. These guidelines are documented in General Chapters <232> (Limits) and <233> (Procedures) in USP 40 NF35 (Second Supplement) and in the general chapter 5.20 of Ph. Eur. Supplement 9.3. Elemental Impurity Mixes help to streamline your laboratory's ICP-OES/ICP-MS impurity analysis with accurate and consistent Certified Reference Materials for both calibration and quality control.

- All mixes produced and analyzed under the scope of ISO/IEC 17025, ISO Guide 34 and ISO/IEC 17034 accreditation
- Convenient concentrations according to the oral and parenteral PDEs given in USP <232> and Ph.Eur. 9.3, general chapter 5.20
- Inorganic mercury included in mix—no need for a separate solution
- COA included in each package
- COA with extended certification report

NEW introductions Biology

Cell-in-a-Box[®] Live Cell Encapsulation Nanotechnology

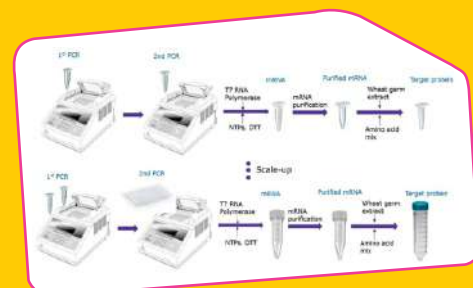

The Cell-in-a-Box[®] technology enables one to encapsulate cells in a protective, semipermeable, cellulose based 2 mm bead. Small pores in the beads allow for nutrient and waste product exchange, but retain the cells within the beads. The beads are durable, do not elicit an immune response from the host and can withstand up to 6 months in an in vivo implant.

Key Properties

- Cellulose-based
- Durable (can last for years in vivo)
- Artificial and semipermeable
- Biocompatible
- Useful for a wide variety of cell types
- Longer cell survival periods
- Encapsulated cells can be frozen and stored

Next Generation Cell Free Protein Expression Kit (Wheat Germ)

A form of synthetic biology, cell-free protein expression (CFPE) is a rapid method to produce recombinant proteins in solution without involving cells. Using biomolecular translation machinery extracted from a range of different cell types, CFPE empowers researchers to express a protein of interest within a day.

Corning Cell Counter

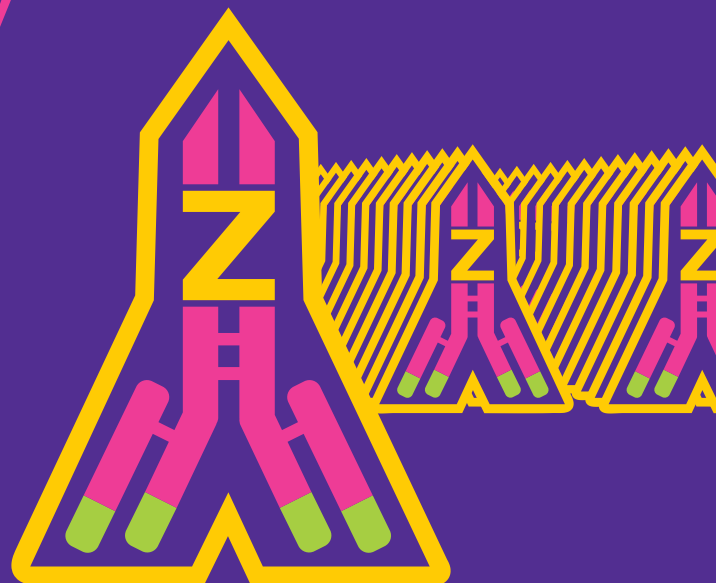

An automated cell counter

- Fastest cell counts in three seconds due to its online image processing
- Higher Accuracy due to its cloud-based machine learning algorithm
- No recurring consumables are required, works with common reusable glass hemocytometer
- Easy to Use through CytoSMART Cloud App
- Data accessibility at anywhere and anytime, instantly generates a report containing the counted cell concentrations and viability

Recombinant Antibody Technology

ZooMAb® Antibodies: Robust, Reproducible and Reliable- Recombinant Monoclonal Antibody Technology you can trust.

A new generation of recombinantly produced monoclonal antibodies which are purified to homogeneity, and precisely dispensed to produce robust and highly reproducible lot-to-lot consistency. Each antibody is validated to reliably perform across multiple application and are provided as a lyophilized product, individually packaged to provide long-term stability and faster shipping (with an Image of ZooMAb Antibodies).

It's time to say GOOD BYE to Distillation...

Limitation of Distillation

- ⚡ No monitoring mechanisms
 - ⚡ High operating cost
 - ⚡ Low resistivity
 - ⚡ High waste water flow
 - ⚡ Does not remove pyrogens
- ⚡ Scaling, high maintenance
 - ⚡ Less flow rate
 - ⚡ Organic carryover
 - ⚡ Water storage is a concern

Distillation Unit

Distillation is the obsolete way of water purification. It does not meet the consistent optimum water **quality**, increase water **wastage** & consume more **Electricity**

IN PROCESS TESTING

A complete solution for bioburden analysis

Merck's membrane filtration and culture media solutions for bioburden testing won't keep you waiting for the accurate results you need to ensure product safety. Merck's membrane filtration technique complies with international standards such as Standard Methods for Examination of Water and Waste Water, US EPA, and EU testing procedures for drinking water. It's simple: the test sample is filtered through a microporous membrane, allowing the retention of any microbial contamination on top of the membrane. Rinsing removes residues that might inhibit the growth of microorganisms. Once the sample is filtered, nutrient medium is added to promote growth of microorganisms for recovery.

Build FOR Better Testing

EZ-Fit Filtration Unit : Convenience without compromise

Your laboratory space is precious - almost as precious as the quality and reliability of your bioburden testing. That's why Merck new EZ-Fit™ Filtration Units for microbial enumeration are stackable. We've given you a wider selection of membranes and the flexibility to use it with solid or liquid media so you can tailor the EX-Fit™ Filtration Units to you bioburden applications. The new drain design provides a perfect contact with agar when transferring the membrane, and the base protective rim ensures that you can trust you results. Every time. And the new EX-Fit™ Filtration Units are a time saver, too -save filtration time on difficult to filter samples thanks to our new pink base design and set up time with our packaging solutions.

Certified Reference Microorganisms

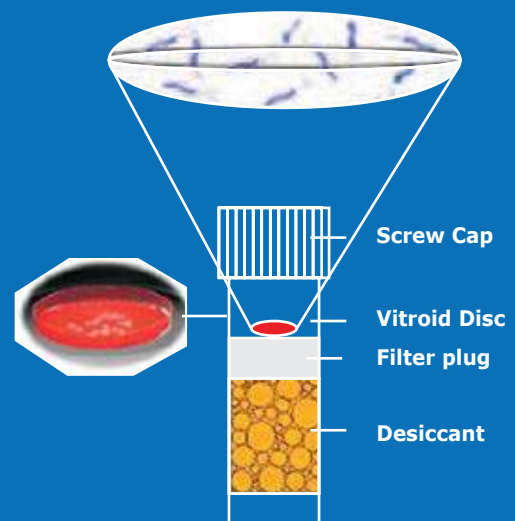

In microbiological testing; the one factor that is repeatedly overlooked is careful sourcing of biological products such as the quality control strains. Incorrect quality control materials may indicate that test results are acceptable when, in fact, there is a problem with the samples being tested. Alternatively, control results may indicate that a test is not performing correctly, instigating unnecessary investigations and repeat testing.

Features

- Defined CFU & low standard deviation (ISO/IEC 17025)
- Economic, convenient and easy to use
- Long shelf life

Applications

- QC to assure the quality of test results (water, food, beverage, environmental etc.)
- Performance testing of media acc. ISO 11133:2014
- Validation of new methods
- Materials for proficiency testing or ring trials
- Method development
- Starter cultures (R&D, Fermentation, ...)
